Brand New Book. Excerpt from History of Physical Astronomy, From the Earliest Ages to the Middle of the 19th Century But mere Observation cannot constitute science. Facts, however care fully recorded, must be subsequently scrutinized, compared, and classified, before any general conclusions can be derived from them, relative to the arrangements of the material universe. The astronomers of Asia, al though patient observers, do not appear to have in any age aspired to this more exalted occupation of the mind. The Greeks first reduced the knowledge relative to the celestial motions into a systematic form. This Object was not, however, effected during the early period of Grecian his tory. The Chaldeans, by confining their attention to the mere occurrence Of phenomena, were unable to arrive at general views of the celestial motions; the philosophers of the Grecian schools, on the other hand, long wasted their transcendent talents in groundless speculations, which were equally ineffectual in producing any permanent in?uence on the progress of Astronomy.
